PEDAGOGY

The HUCK Bird's Nest promotes learning through play. When children use it to swing, they develop their sense of balance, improve their coordination and their spatial awareness. They explore their physical limits, build up strength and stimulate their imagination. Through the fun of playing, they develop their creativity and problem-solving skills. From shared adventures to solo flights, our Bird's Nest swing promotes the overall development of children.

INCLUSION

The Bird's Nest swing supports children to experience inclusion as a matter of course. The play equipment brings children of all age groups and abilities together. Its open design invites every child to join in, the laughter, the thrill and the feeling of sense of belonging together.

MOTORISM

The HUCK Bird's Nest supports motor development by several muscle groups during play. At the same time it promotes balance, coordination and spatial awareness. The swinging back and forth supports the core strength, while stretching and gripping the ropes strengthens hand-eye coordination. In a playful way children can improve their motor skills and have fun at the same time.
